V-NOTCH SEEPAGE WEIRS

ABOUT

- V-Notch is used for **water seepage monitoring** at the dam wall structure.
- V-Notch can be also used for dam reservoir water level monitoring and catchment water level monitoring
- The basic principle is that discharge is directly related to the water depth above the crotch (bottom) of the V; this distance is called head (h).
- The V-notch design causes small changes in discharge to have a large change in depth allowing more accurate head measurement than with a rectangular weir.

SPECIFICATIONS

- Automatic Water Level Recorder System
- WL61 Radar Sensor – 1m range and 10m of cable.
- Bracket included.
- Data logger CR800, CD295 display and program.
- Stainless Steel cabinet with 30 degree sloping roof, side vents.
- Security door switch.
